喝下细菌的医生

The Doctor Who Drank Bacteria to Win an Argument

一杯菌液，如何改变对胃病的认识？

英文原文

In 1984 Barry Marshall, a 32-year-old doctor at Fremantle Hospital, drank a **brew** of beef **broth** into which the **microbial** growth of two Petri dishes had been **scraped**.

The **prevalent doctrine** blamed **ulcers** on stress, **spicy** food, and excess **acid secretion**. No **bacterium**, the **profession firmly** held, could **withstand** so **caustic** and **hostile** a **habitat**.

Yet Robin Warren, a **pathologist** at Royal Perth Hospital, had seen curved, **coiled** bacteria in **gastric biopsies** from patients with gastritis. Marshall began to **collaborate** with him. **Attempts** to **culture** the **germ** were **invariably unsuccessful** until Easter 1982, when plates sat **undisturbed** in the **incubator** for about five days. They were **ordinarily binned** after two. Colonies **blossomed**. The **organism** was later named Helicobacter pylori.

In 1983 **unimpressed assessors** at the Gastroenterological Society of Australia **relegated** the pair's paper to the bottom tenth of that year's **submissions**. **Efforts** to infect **swine** were **likewise in vain**. Marshall made himself the **guinea pig**.

Within days Marshall was **vomiting**, his breath had a **disagreeable odour** and **weariness set in**. About ten days later an endoscopy **revealed** gastritis, an **inflammation** of the stomach's **mucous membrane** and a **precursor** to ulcers, **albeit** not an ulcer itself. The **germ** was **cultured directly** from his stomach.

Spurred on by his **insistent spouse**, Marshall took **antibiotics**, which cleared the infection. **Ulcers** came to be treated with such **medication**.

英文原文（续）

In 2005 Marshall and Warren shared the Nobel Prize in Physiology or Medicine for discovering Helicobacter pylori and its **role** in gastritis and peptic ulcer disease. Gastritis, the illness Marshall had **willingly** given himself, is named in the **prize citation**.

中文译文

1984年，巴里·马歇尔，一位32岁的医生在弗里曼特尔医院（任职），喝下了一份牛肉清汤混合液（培养基底），两个培养皿里的微生物培养物早已被（从上面）刮了下来（并放进了这混合液里）。

当时盛行的（主流的）学说把溃疡归咎于压力、辛辣的食物以及过多的胃酸分泌。医学界坚定地认为，没有哪种细菌能经受住如此具有腐蚀性又不利的栖息环境。

然而，皇家珀斯医院的病理学家罗宾·沃伦早已在胃部的活检样本中看到过弯曲、盘绕的细菌，这些样本取自胃炎病人。马歇尔开始与他合作。培养这种病菌的尝试无一例外地未能成功，直到1982年复活节，当时培养皿原封不动的在培养箱里放了约五天。这些培养皿通常两天后就会被扔掉。菌落蓬勃生长起来。这种微生物后来被命名为幽门螺杆菌。

1983年，澳大利亚胃肠病学会那些不以为然的评审，把两人的论文贬入当年投稿中最差的10%。让猪（专门用来实验）感染（这种细菌）的多番努力同样徒劳无功。马歇尔把自己当成了小白鼠。

几天之内，马歇尔就呕吐起来，他呼出的气带着难闻的气味，疲倦感也出现了（不好的事到来且持续）。约十天后，胃镜检查显示出胃炎，也就是胃黏膜的炎症，也是溃疡的前兆，尽管它本身还不是溃疡。这种病菌是直接从他胃里培养出来的。

被他态度坚决的妻子（不断）催促，马歇尔（终于）服用了抗生素，并且清除了感染。溃疡后来逐渐开始用这类药物来治疗。

2005年，马歇尔与沃伦共同获得了诺贝尔生理学或医学奖，以表彰他们发现了幽门螺杆菌及其在胃炎和消化性溃疡中的作用。胃炎——马歇尔当年心甘情愿地让自己染上的病——被写进了奖项颁奖词（获奖评语）。

词汇与表达

brew n.
混合液

broth n.
清汤

microbial adj.
微生物

scraped v.
刮了下来

prevalent adj.
盛行的
The prevalent doctrine blamed ulcers

doctrine n.
学说
prevalent doctrine blamed ulcers

ulcers n.
溃疡

spicy adj.
辛辣的

acid n.
胃酸

secretion n.
分泌

bacterium n.
细菌

profession n.
医学界

firmly adv.
坚定地

withstand v.
经受住
could withstand

caustic adj.
具有腐蚀性

hostile adj.
不利的
so caustic and hostile a habitat.

habitat n.
栖息环境

pathologist n.
病理学家
a pathologist at Royal Perth

coiled adj.
盘绕的

gastric adj.
胃部的
in gastric biopsies

biopsies n.
活检样本
gastric biopsies

词汇与表达（续）

collaborate v.
合作
to collaborate with him.

Attempts n.
尝试

culture v.
培养
Attempts to culture the germ

germ n.
病菌

invariably adv.
无一例外地
were invariably unsuccessful

unsuccessful adj.
未能成功

undisturbed adj.
原封不动的

incubator n.
培养箱
in the incubator for about five days.

ordinarily adv.
通常

binned v.
被扔掉

blossomed v.
蓬勃生长

organism n.
微生物
The organism was later named Helicobacter

unimpressed adj.
不以为然的

assessors n.
评审

relegated v.
贬入
relegated the pair's paper

submissions n.
投稿

Efforts n.
努力

in vain phr.
徒劳无功
were likewise in vain.

swine n.
猪

likewise adv.
同样

guinea pig n.
小白鼠
Marshall made himself the guinea pig.

词汇与表达（续）

vomiting n.
呕吐

disagreeable adj.
难闻的

odour n.
气味

weariness n.
疲倦感

set in phr.
出现了

revealed v.
显示出

inflammation n.
炎症
an inflammation

mucous membrane n.
黏膜
the stomach's mucous membrane

precursor n.
前兆
and a precursor to ulcers,

albeit conj.
尽管
albeit not an ulcer itself.

cultured v.
培养
The germ was cultured directly from his stomach.

directly adv.
直接

Spurred on v.
催促
Spurred on by his insistent spouse,

insistent adj.
坚决的

spouse n.
妻子

antibiotics n.
抗生素
Marshall took antibiotics,

medication n.
药物

role n.
作用
its role in gastritis

willingly adv.
心甘情愿地

prize citation n.
奖项颁奖词
is named in the prize citation.

文章简述

- 旧说：医学界曾把溃疡归于压力、辛辣食物和胃酸过多，认为胃里的强酸会让细菌无法存活。
- 发现：沃伦在胃炎患者胃中看见细菌，与马歇尔合作培养；过去培养皿放两天就扔，一次留置约五天后终于长出细菌，后来命名为幽门螺杆菌。
- 自试：1984年，马歇尔喝下菌液后呕吐、疲惫，检查发现胃黏膜发炎，也从胃部样本中培养出同种细菌；他得的是胃炎，并非溃疡。
- 治疗：马歇尔服用抗生素后感染消退，后来溃疡治疗也逐步采用这类药物。
- 认可：2005年，两人因发现这种细菌及其在胃炎、消化性溃疡中的作用共获诺奖；获奖理由也明确写到了胃炎。
