十一天不睡觉的少年

Eleven Days Without Sleep

十一天不睡觉，身体会怎样？

英文原文

On 28 December 1963 Randy Gardner, a 17-year-old science **enthusiast** at a San Diego high school, set out to **forgo slumber** for a **regional** science fair. Two **companions diligently jolted** him **awake** whenever his **alertness waned** and logged his **mood**. The project, a **voluntary endeavour**, went on to **take first place**.

William Dement, a sleep researcher at Stanford, read press **coverage** of the attempt and was **intrigued**. He drove to San Diego and **assisted** John J. Ross, a Navy researcher, **in** monitoring the **sleepless** boy **closely**. The two **investigators attentively** noted the **fluctuations** in his state as the **deprivation progressively deepened**.

The **consequences** soon **mounted**. Gardner grew **moody**, lost **concentration**, and found his **short-term** memory **impaired**. He became **suspicious**, at times **paranoid**, and began to **hallucinate**. On the fourth day he was **gripped by** the **delusion** that he was a professional American football player.

Gardner ended the **wearying** attempt on 8 January 1964, after 264.4 hours, about 11 days and 25 minutes. He then slept **soundly** for about 14 hours and woke apparently **refreshed**. Researchers **probed** the case in a 1965 **scholarly** paper, which helped **highlight** microsleeps, **involuntary lapses into** sleep lasting a few seconds. Gardner may have had such **momentary bouts** without noticing.

In 1997 Guinness World Records **discontinued** monitoring such attempts because of the health **perils**, and others have since **alleged** longer **stints** awake. In a 2017 interview Gardner said severe **insomnia** had **tormented** him for about a decade, and he himself **pinned the blame on** the experiment. The boy who had seemed to **bounce back from exhaustion** with one long rest would, decades later, **barely doze off**.

中文译文

1963年12月28日，圣迭戈一名17岁的高中科学爱好者兰迪·加德纳，为了参加一场地区性的科学展，开始尝试放弃睡眠。两名同伴尽心尽力，每当他的警觉减弱，就让他猛然清醒过来，并记录了他的情绪。这个项目，一次自愿的尝试，继而夺得了第一名。

威廉·德门特，斯坦福大学的睡眠研究者，读到了媒体对这次尝试的报道，并且非常感兴趣。他驾车前往圣迭戈，协助约翰·J·罗斯，一位海军研究员，去密切监视这个不眠的少年。两位研究人员专心地记下了他状态的种种波动，其间睡眠剥夺逐步加深。

后果很快便开始不断加剧。加德纳变得喜怒无常，注意力难以集中，他的短时记忆也受损了。他变得多疑，有时甚至偏执/妄想性的，还开始出现幻觉。第四天，他被一种妄想/错觉攫住了，以为自己是一名美式橄榄球职业球员。

加德纳于1964年1月8日结束了这场令人疲惫的尝试，共历时264.4小时，约合11天零25分钟。随后他酣畅地/深度地睡了约14小时，醒来时似乎神清气爽/恢复精神的。研究者们在1965年的一篇学术论文中探究了/深入研究这一案例，该论文有助于凸显微睡眠——指不由自主地陷入持续几秒钟短暂睡眠的状态。加德纳可能经历过这种短暂的发作而未曾察觉。

1997年，吉尼斯世界纪录因健康风险停止了监测此类尝试；此后，其他人声称/宣称有过更长的清醒时段。在2017年的一次采访中，加德纳说严重的失眠折磨了他约十年，他本人把它归咎于这次实验。那个曾看似只要睡个长觉，就能从精疲力竭中迅速恢复的少年，几十年后，却几乎连打个盹都费劲。

词汇与表达

enthusiast n.
爱好者
a 17-year-old science enthusiast

forgo v.
放弃
to forgo slumber

slumber n.
睡眠

regional adj.
地区性的

companions n.
同伴

diligently adv.
尽心尽力

jolted awake v.
让……猛然清醒过来

alertness n.
警觉
his alertness waned

waned v.
减弱
his alertness waned

mood n.
情绪

voluntary adj.
自愿的
a voluntary endeavour

endeavour n.
尝试
a voluntary endeavour

take first place 动词短语
夺得了第一名

coverage n.
报道

intrigued adj.
非常感兴趣
was intrigued

assisted in v.
协助

sleepless adj.
不眠的

closely adv.
密切

investigators n.
研究人员

attentively adv.
专心地

fluctuations n.
波动
the fluctuations in his state

deprivation n.
剥夺
the deprivation progressively deepened

progressively adv.
逐步

deepened v.
加深

consequences n.
后果

mounted v.
不断加剧

moody adj.
喜怒无常

concentration n.
注意力
lost concentration

short-term adj.
短时

词汇与表达（续）

impaired adj.
受损了
short-term memory impaired

suspicious adj.
多疑

paranoid adj.
偏执/妄想性的
at times paranoid

hallucinate v.
出现幻觉
began to hallucinate

gripped by v.
被……攫住了

delusion n.
妄想/错觉
gripped by the delusion

wearying adj.
令人疲惫的

soundly adv.
酣畅地/深度地

refreshed adj.
神清气爽/恢复精神的

probed v.
探究了/深入研究

scholarly adj.
学术

highlight v.
凸显

involuntary adj.
不由自主地
involuntary lapses into sleep

lapses into n.
陷入

momentary adj.
短暂的

bouts n.
发作

discontinued v.
停止了
discontinued monitoring such attempts

perils n.
风险
because of the health perils

alleged v.
声称/宣称

stints n.
时段

insomnia n.
失眠
severe insomnia

tormented v.
折磨了
had tormented him for about a decade

pinned the blame on v.
把……归咎于
pinned the blame on the experiment

bounce back from v.
从……中迅速恢复
bounce back from exhaustion

exhaustion n.
精疲力竭
bounce back from exhaustion

barely adv.
几乎

doze off v.
打个盹

文章简述

- 挑战：1963年底，17岁高中生兰迪·加德纳为参加科学展尝试不睡觉；同伴帮他保持清醒，睡眠研究者随后加入监测。
- 损害：他逐渐情绪不稳，注意力和短时记忆受损，出现多疑和幻觉，甚至误以为自己是职业橄榄球员。
- 休息：264.4小时、约11天后，他结束挑战；酣睡约14小时，醒来时似乎恢复了精神。
- 疑点：他可能曾不自觉地睡着几秒，这叫微睡眠，本人未必察觉；吉尼斯1997年因健康风险停止记录此类挑战。
- 晚年：2017年，他说严重失眠已折磨自己约十年，并认为是当年实验造成的；文章没有证明两者有因果关系。
